Below is one study of Pub-Med on some natural therapies :

Black salve is not a natural therapy. It contains significant concentrations of synthetic chemicals. Black salve does not appear to possess tumour specificity with in vitro and in vivo evidence indicating normal cell toxicity. **Black salve does appear to cure some skin cancers**, although the cure rate for this therapy is currently unknown. The use of black salve should be restricted to clinical research in low risk malignancies located at low risk sites until a better understanding of its efficacy and toxicity is developed. Where a therapy capable of harm is already being used by patients, it is ethically irresponsible not to study and analyse its effects. Although cautionary tales are valuable, black salve research needs to move beyond the case study and into the carefully designed clinical trial arena. Only then can patients be properly informed of its true benefits and hazards.

**\*Below is Vince Curuso brother with one application of Amazon Black Slave .**

The Squamous cell carcinoma after the application of Black salve (a toothpick 'dob' in the centre of ulcer) the Black Slav then attacks the cancer and a plug forms. The plug then falls out. The crater that's left then heals and gradually closes over as all the cancerous tissue is now gone. (the pictures left and right are an actual case Vince Curuso's brother who has red hair and fair skin ) taken 11Nov 2020.

Amazon Topical Skin Crème “Clinical Use” above is the only one to use it is formulated in USA link below:  
<https://www.alphaomegalabs.com/amazon-black-topical-salve-the-original-formula-1990-2003.html>

The product is only to be used very sparingly , so directions are only a ‘dob’ on the end of a tooth pick in the center of the cancerous lesion is all that’s needed, on a bigger cancer a second treatment may be needed.

Also keep the lesion ‘aired out’ as much as possible , spray regularly with ‘silver water’ for any surrounding infection.

The ‘smell’ of the wound is necrosis of the flesh (dead flesh) as the cancer kills off cells around it .

Diet : minimize any refined sugars as high sugar diets feed cancer cells or any similar growths and various types of fungus.
